

Manage your feed line from one location with SyncMaster

ALMOST AS EASY AS A SUPER COOL RC CONTROLLER

SYNCMaster...one station to rule them all!

COE Press Equipment's new SYNCMaster™ integrated controls package for coil feed lines allows operators to manage many servo feed, straightener, and coil reel setups and functions from a single touchscreen, increasing the efficiency of operations, and decreasing the chance of error.

SyncMaster provides features typically only included with fully-integrated PLC-based systems, all at a lower price point. A SyncMaster system includes coil reel, power straightener with an AC drive and PLC that controls the straightener and reel, and communicates with the servo feed. The servo feed has a touchscreen HMI that controls the feed and communicates via Ethernet with the straightener and reel.

[Download the SYNCMaster flyer](#) for a complete list of benefits and features or call us today to learn more.
